### Carbopol® 940 Polymer

Carbopol® 940 is an efficient thickener at high viscosity and forms sparkling, clear, water or hydro-alcoholic gels. This polymer has an extremely short flow property (non-drip). Suggested applications include clear gels, hydro-alcoholic gels, and creams. Carbopol® ETD 2001 is the easy-to-disperse version of **Carbopol® 940**, while **Carbopol® Ultrez 10**, the latest in the Carbopol® polymer family, is the easiest to disperse and offers a broader range of applications.
